(510) 526-0329

EDUCATION

- 1985 Master of Science in Computer Science from San Francisco State University, SF, CA.
- 1983 Bachelor of Arts in Physics from University of California at Berkeley, CA.

EMPLOYMENT

- April 2011-present **Sr. Member Technical Staff.** Dolby Laboratories, Inc.
Research and develop new encoding and tone-mapping methods for high dynamic range (HDR) imaging.
- October 2002-present **Consultant.** Anywhere Software, Berkeley, CA.
Provide expert services in high dynamic-range HDR imaging, tone-mapping, lighting simulation, display hardware, and graphics software. Patented new technology for high dynamic range display in collaboration with the Structured Physics Lab at the Univ. of British Columbia, which subsequently spun off Brightside Technologies, purchased by Dolby Laboratories in 2007. Implemented new HDR merge and ghost removal function under contract with Adobe. Developed custom rendering environment for DecorMagic, Inc. Short-term contracts with Microsoft, Optical Research Associates, Visarc, and NASA. Continued development, enhancement and support of *Radiance* rendering package under contract with the Berkeley National Laboratory. Created advanced Photosphere browser application under Mac OS X for standard and high dynamic-range images.
- July 2001-September 2002 **Managing Scientist.** Human Factors Practice, Exponent - Failure Analysis Assoc., Menlo Park, CA.
Expert in lighting simulation, color, and visibility. Measured, analyzed and simulated visibility in roadway accidents for the purpose of courtroom reconstruction and testimony. Analyzed color and appearance for product development. Developed software and algorithms for high dynamic-range photography, display, and analysis. Conducted research and authored various reports on risks related to head-mounted displays, laser range-finders, and manufacturing.
- June 1999-April 2001 **Member of Technical Staff.** Lab Research and Development, Shutterfly.com, Redwood City, CA.
Image processing algorithm development for digital photography. Designed and developed C++ library for digital lab image processing. Developed comprehensive model for digital photoprinter calibration and incorporated into proprietary color management system. Designed and implemented automatic white-balancing, gamut-constrained brightening, contrast enhancement, and artifact-free JPEG decompression algorithms.
- May 1997-June 1999 **Member of Technical Staff.** Applied Graphics Research, Engineering Division, Silicon Graphics, Inc., Mountain View, CA.
Developed new techniques and algorithms for physically-based rendering and interactive techniques for virtual reality applications. Created new TIFF standard for high dynamic-range image representation and tone-mapping algorithm to mimic human visual response. Developed holographic rendering technique using physically accurate ray tracing.

- January 1989-
April 1997 **Staff Scientist II.** Lighting Systems Research, Energy and Environment Division, Lawrence Berkeley National Laboratory, Berkeley, CA.
Head of Computer Imaging Project. Manage investigation of new illumination and reflection models and validation of simulation techniques. Invent and develop measurement devices and techniques as required. Supervise and coordinate the development of simulation software, databases and software links necessary to transfer lighting simulation technology to design practitioners. Publish research in archival journals.
- March-
November
1991 **Professor.** Solar Energy Research Group, Physics Department, Ecole Polytechnique Federale de Lausanne, Lausanne, Switzerland.
Simulation researcher in Swiss LUMEN project. Created and implemented efficient algorithms for simulating advanced daylighting systems. Developed programs for evaluating daylighted spaces for visual comfort and energy savings. Integrated work with architectural modeling and database software. Documented and published research.
- October 1983-
December
1989 **Research Associate.** Lighting Systems Research, Applied Science Division, Lawrence Berkeley Laboratory, Berkeley, CA.
Chief researcher in Image Generation with Ray Tracing Project. Computer graphics specialist. Created advanced lighting simulation for complicated environments with diffuse and specular surfaces. Experimenter in Photocell Placement and Controls Project. Designed control hardware and software used in experiments. Developed package for data reduction and visualization. Supervised summer students. Published research.

HONORS AND AWARDS

2012 International Building Performance Simulation Association (IBPSA-USA) Achievement Award

2007 ACM SIGGRAPH Computer Graphics Achievement Award

1991 LBL Technology Transfer Award for the development and distribution of *Radiance*.

1990 Award of Merit from the Federal Laboratory Consortium for Technology Transfer for *Radiance*.

“Winter Solstice” and “Tridimensional Chess” chosen for national juried exhibit, *Art of the Computer*, held during April 1988 at the Euphrat Gallery in Cupertino, CA.

CITIZENSHIP

Born U.S. Citizen.
