

High Dynamic Range Imaging Acquisition, Display, and Image-Based Lighting

By Erik Reinhard, *University of Central Florida*

Greg Ward, *Independent Consultant*

Sumanta Pattanaik, *University of Central Florida*

Paul Debevec, *Institute for Creative Technologies, University of Southern California*

August 2005 • ISBN 0-12-585263-0 • Hardback • 500 Pages • \$69.95

The Morgan Kaufmann Series in Computer Graphics

Foreword by Mark Fairchild, Rochester Institute of Technology

“Here at last is the definitive guide to high dynamic range imaging—a field that is poised to revolutionize the way we view, manipulate and enjoy digital images. The authors provide a detailed review of the basic concepts and methods necessary to incorporate high dynamic range images into any practical application. This book is indispensable to researchers in computer graphics, digital design and visualization; indeed to anyone who cares about the realism and fidelity of the images they use on a daily basis.”

—Heinrich Bülthoff, Executive Director, Max-Planck-Institute
for Biological Cybernetics

High dynamic range imaging produces images with a much greater range of light and color than conventional imaging. The effect is stunning, as great as the difference between black-and-white and color television. *High Dynamic Range Imaging* is the first book to describe this exciting new field that is transforming the media and entertainment industries. Written by the foremost researchers in HDRI, it will explain and define this new technology for anyone who works with images, whether it is for computer graphics, film, video, photography, or lighting design.

Features

- Written by the leading researchers in HDRI
- Covers all the areas of high dynamic range imaging including capture devices, display devices, file formats, dynamic range reduction, and image-based lighting
- Includes a DVD-ROM with over 4 GB of HDR images as well as source code and binaries for numerous tone reproduction operators for Windows, Linux, and Mac OS X

Table of Contents

Foreword by Mark Fairchild

Preface

1 Introduction

2 Light And Color

- 2.1 Radiometry
- 2.2 Photometry
- 2.3 Colorimetry
- 2.4 Color Spaces
- 2.5 White Point and Illuminants
- 2.6 Color Correction
- 2.7 Color Opponent Spaces
- 2.8 Color Appearance
- 2.9 Display Gamma
- 2.10 Brightness Encoding
- 2.11 Standard RGB Color Spaces

3 HDR Image Encodings

- 3.1 LDR versus HDR Encodings
- 3.2 Applications of HDR Images
- 3.3 HDR Image Formats
- 3.4 HDR Encoding Comparison
- 3.5 Conclusions

4 HDR Image Capture

- 4.1 Photography and Light Measurement
- 4.2 HDR Image Capture from Multiple Exposures
- 4.3 Film Scanning
- 4.4 Image Registration and Alignment
- 4.5 The Mean Threshold Bitmap Alignment Technique
- 4.6 Deriving the Camera Response Function
- 4.7 Ghost Removal
- 4.8 Lens Flare Removal
- 4.9 Direct Capture of HDR Imagery
- 4.10 Conclusions

5 Display Devices

- 5.1 Hardcopy Devices
- 5.2 Softcopy Devices

6 The Human Visual System and HDR Tone Mapping

- 6.1 Tone-mapping Problem
- 6.2 Human Visual Adaptation
- 6.3 Visual Adaptation Models for HDR Tone Mapping
- 6.4 Background Intensity in Complex Images
- 6.5 Dynamics of Visual Adaptation
- 6.6 Summary

7 Spatial Tone Reproduction

- 7.1 Preliminaries
- 7.2 Global Operators
- 7.3 Local Operators
- 7.4 Summary

8 Frequency Domain And Gradient Domain Tone Reproduction

- 8.1 Frequency Domain Operators
- 8.2 Gradient Domain Operators
- 8.3 Performance
- 8.4 Discussion

9 Image-Based Lighting

- 9.1 Introduction
- 9.2 Basic Image-based Lighting
- 9.3 Capturing Light Probe Images
- 9.4 Omnidirectional Image Mappings
- 9.5 How a Global Illumination Renderer Computes IBL Images
- 9.6 Sampling Incident Illumination Efficiently
- 9.7 Simulating Shadows and Scene-Object Interreflection
- 9.8 Useful IBL Approximations
- 9.9 Image-based Lighting for Real Objects and People
- 9.10 Conclusions
